

## Pure Cloud Faxing Solution for **SHARP**

### eGoldFax™ Cloud Faxing

eGoldFax Cloud Faxing service lets you fax directly from your desktop, quickly and easily. No up-front costs, no on site fax tel lines or tel system integration, no server software to install. Ideal for small organizations. **All you need is Internet.**

#### How Does It Work?

eGoldFax Cloud Faxing is easy to set up. No software to download or install. GoldFax Cloud Fax Telephone Service is simple to set up. It is configured to transmit your faxes to the GoldFax Cloud Fax Telephone Service. You are operational in minutes.

#### Sharp MFP Integration

eGoldFax can be integrated with **Sharp OSA 4.0 or above** MFPs. In order to register a Sharp MFP, you will need to provide GoldFax with the 10 digit serial number of the MFP, the model number, and a unique nickname for the device.

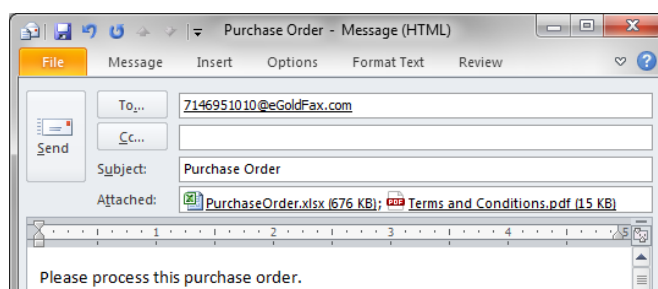

#### Registering a Sharp OSA MFP

To register the device, complete the instructions below:

- Go to "Application Settings"
- Select "External Application Settings"
- Log in with the Administrator username and password
- Click "Add" to add a New Application
- Name the application **eGoldFax**
- Type or paste the URL <http://mfp.egoldfax.com/sharp> in the field address for application UI
- Enter "60 Seconds" for Time-out value
- Check the "Use Extended Platform" Option
- Click Submit

#### Outbound Faxing

To fax from your computer or smart device, simply address an email message using "Fax Number@eGoldFax.com" format. Provide the fax number and enter the subject and message text for the fax cover sheet. Attach the document(s) you want to fax and send the email. The GoldFax Cloud Fax Telephone Service sends the fax.

You can scan and fax paper documents with eGoldFax from your Scan-to-Email enabled MFPs. Simply scan a paper document to your email and fax from your desktop or use the panel on your MFP to type the fax destination number at your configured email fax domain and fax directly from the MFP (example: [7146951010@egoldfax.com](mailto:7146951010@egoldfax.com)).

#### Inbound Faxing

Each inbound fax is routed to you via email as a message with a PDF fax attachment. You can obtain additional DID fax numbers (Toll and Toll Free). Use DID fax numbers to route received faxes to specific email addresses. Use DID fax #s for key users, departments, or business processes. Keep your fax #s - port to Cloud Fax Tel Service (Save \$30/mo. per Analog POTS fax line eliminated). **No fax busy, never miss an inbound fax.**

GoldFax, a Waterford Technologies Company, has been developing office and network software for 30 years. Industry leading organizations worldwide have selected GoldFax for their critical fax document delivery solutions - including small, medium, and Fortune 1000 companies, government, and universities with over 1,000,000 end-users.
